

“In A Few Words”

A message from the Managing Editor

After a long arduous process the first issue of the Investigative Sciences Journal (ISJ) is being published, albeit a little shorter than anticipated. However, the one article that is being provided does provide valuable information for investigators concerning the unlimited utilization of material for DNA typing. In this particular case the authors examined 800 year old mummified samples to determine the gender using traditional forensic DNA methods. I am confident you will find this to be very informative.

In the future the ISJ is looking to other avenues for manuscripts that will relate to the investigative sciences. I therefore encourage all of you to solicit writings from your colleagues to be submitted to the ISJ. The online process is user friendly and professionally maintained. For additional information please contact me at ISJournal@hotmail.com. Thank you.
